

**Appendix 1.** We relied on the U.S. Census bureau’s definition of urban areas and downloaded the U.S. Census Bureau’s 2017 urban areas shapefile (available here: [https://www.census.gov/geo/maps-data/data/cbf/cbf\\_ua.html](https://www.census.gov/geo/maps-data/data/cbf/cbf_ua.html)). We also focused our analysis on the contiguous United States, removing Alaska and Hawaii from consideration. We had a potential pool of 2,888 cities, represented below. The final piece of information necessary for a city to be included was a minimum of 50 eBird checklists.

**Table A1.** The 2,888 potential cities considered for analysis sorted by city size (Area km<sup>2</sup>). 1,581 cities were included in analyses (i.e., received a ‘yes’ in that column).

City	State	Lat	Lng	Population	Distance to coast	Total richness	Total lists	Area (km <sup>2</sup> )	In analysis
